

PC LOCK

Auto primary chain adjuster locking Clamp
For 2006-2017 Dyna & 07-up Softail & Touring

Advantages

- Prevents auto primary chain adjuster from ratcheting up too far and over tightening primary chain
- Less cost than other “fixed” primary chain adjusters
- Quieter, retains spring cushion built into stock adjuster and has no chain slap at idle like fully spring loaded adjusters
- Reduces wear on bearings primary chain & compensator

Installation notes

- Requires removal of primary cover to install & adjust
- No grinding on case is required. Has clearance for about 6 clicks on the adjuster. If more adjustment is needed primary chain should be replaced or case can be ground on
- Locks the wedge under the primary shoe in place so the auto adjust spring can be removed
